

**Q1.**

Many internal processes of the human body are controlled by hormones.

Hormones are produced by glands.

**Figure 1** shows glands in a woman's body.

**Figure 1**

(a) Which gland is the pituitary gland?

Tick (✓) **one** box.

A       B       C       D

(1)

(b) Which gland is the pancreas?

Tick (✓) **one** box.

A       B       C       D

(1)

The hormone insulin helps to decrease the blood glucose concentration.

Insulin causes its target organs to take in glucose from the blood.

(c) Which of the following is a target organ for insulin?

Tick (✓) **one** box.

Bladder

Heart

Liver

(1)

(d) The glucose is stored as an insoluble substance.

What is the insoluble storage substance that is formed from glucose?

Tick (✓) **one** box.

Glycogen

Protein

Urea

(1)

Scientists investigated the effect of a glucose drink on the concentration of glucose in a person's blood.

This is the method used.

1. Take a small sample of blood from the person.
2. Measure the concentration of glucose in the person's blood.
3. Give the person a drink containing 50 grams of glucose.
4. Measure the concentration of glucose in the person's blood at intervals.
5. Calculate the **change** in blood glucose concentration from the starting value.

**Figure 2** shows the results.

**Figure 2**

**Figure 2** shows the **change** in blood glucose concentration.

- (e) At the start of the investigation, the blood glucose concentration was 5 mmol/dm<sup>3</sup>.

Calculate the highest blood glucose concentration during the investigation.

Use information from **Figure 2** in your answer.

---

---

---

Highest blood glucose concentration = \_\_\_\_\_ mmol/dm<sup>3</sup>

(2)

- (f) What is the time taken for the blood glucose concentration to decrease from its highest value back to the starting value?

Use data from **Figure 2** in your answer.

---

Time taken = \_\_\_\_\_ minutes

(1)

- (g) Why can you **not** be certain that your answer to part (f) is accurate?

---

\_\_\_\_\_ (1)

- (h) **Figure 2** above shows the results for a person who does **not have** Type 2 diabetes.

Sketch a line on **Figure 2** to show the results you would expect for a person who **has** Type 2 diabetes.

(2)  
(Total 10 marks)

**Q2.**

Reflex actions are coordinated by the nervous system.

- (a) What is meant by the term 'reflex action'?

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

(2)

- (b) A woman's hand accidentally touches a hot object.

The woman moves her hand away rapidly.

Describe how the woman's nervous system coordinates the reflex action.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

(6)

(c) The endocrine system coordinates many internal functions of the body.

Give **three** ways coordination by the endocrine system is different from coordination by the nervous system.

1 \_\_\_\_\_

\_\_\_\_\_

2 \_\_\_\_\_

\_\_\_\_\_

3 \_\_\_\_\_

\_\_\_\_\_

(Total 16 marks)

**Q3.**

The pie chart below shows the water loss from a person on one day.

(a) The total water loss was 2600 cm<sup>3</sup>.

Calculate the percentage of the total water loss that was lost as urine.

---

---

---

Percentage lost as urine = \_\_\_\_\_%

(2)

A marathon race is 42 km long.

(b) What happens to the volume of water lost as sweat when a person runs a marathon?

---

---

(1)

(c) What must marathon runners do to prevent themselves becoming dehydrated?

---

---

(1)

(d) Complete the sentences.

Choose answers from the box.

Choose the answer from the box.

<b>carbohydrate</b>	<b>lipid</b>	<b>protein</b>	<b>salt</b>
---------------------	--------------	----------------	-------------

A person makes a lot of urea if the person's diet contains a lot of \_\_\_\_\_

(1)

(b) Why must urea be excreted from the body?

---

---

(1)

(c) A person produces more carbon dioxide during exercise than when resting.

Complete the sentences.

Choose answers from the box.

<b>breathing</b>	<b>digestion</b>	<b>egestion</b>
<b>osmosis</b>	<b>respiration</b>	

The process that makes carbon dioxide is \_\_\_\_\_

During exercise, extra carbon dioxide can be removed from the body by increasing

the rate of \_\_\_\_\_.

(2)

(d) Excess water must also be removed from the body.

If a person sweats a lot, less water will be excreted in the urine.

A healthy person did the same amount of exercise on each of 3 days.

The following table shows information for the 3 days.

<b>Day</b>	<b>Air temperature in °C</b>	<b>Volume of water consumed in cm<sup>3</sup></b>	<b>Relative amount of urine produced by the kidneys</b>
1	30	1500	

2	20	1500	
3	15	2000	

Complete the table.

Choose answers from the box.

least	medium	most
-------	--------	------

(2)

Some people have kidney disease.

Kidney disease may be treated by dialysis or by having a kidney transplant operation.

- During dialysis, a person is connected to a machine that filters the blood.
- Each dialysis session lasts about 6 hours.
- The person has several dialysis sessions each week.

Figure 1 shows how dialysis works.

Figure 1

(e) How does urea move out of the blood during dialysis?

Tick (✓) **one** box.

Diffusion

Digestion

Osmosis

Respiration

(1)

(f) Which substance in **Figure 1** does **not** pass from the blood into the dialysis fluid?

Give the reason for your answer.

Substance

---

Reason

---

---

(2)

Two people have kidney disease.

- Person **A** is treated by dialysis.
- Person **B** has had a kidney transplant.

**Figure 2** shows changes in the urea concentration in the blood of each person over 2 weeks.

**Figure 2**

(g) How many dialysis sessions did person **A** have **each week**?

---

(1)

(h) What happens to the concentration of urea in the blood between dialysis

sessions?

\_\_\_\_\_

(1)

- (i) Give **two** reasons why a kidney transplant is a better method for treating kidney disease than dialysis.

1 \_\_\_\_\_

\_\_\_\_\_

2 \_\_\_\_\_

\_\_\_\_\_

(2)

**Q5.**

Water conservation is important to the human body.

- (a) Which gland releases the hormone that controls water loss from the body?

Tick (✓) **one** box.

Adrenal

Pancreas

Pituitary

Thyroid

(1)

- (b) Which hormone helps the kidneys to control water loss from the body?

Tick (✓) **one** box.

ADH

Adrenaline

LH

---

---

(3)

Metformin is a drug used for treating people who have Type 2 diabetes.

Scientists investigated the effects of metformin and two other drugs, **A** and **B**.

The scientists wanted to see how the drugs affected the blood glucose concentrations of 220 people with Type 2 diabetes.

This is the method used.

1. Put the 220 people into five groups.
2. Treat each group with a different drug or combination of drugs for several weeks.
3. Give each person a meal high in carbohydrate.
4. Measure the blood glucose concentration of each person 30 minutes after the meal and again 3 hours after the meal.

(c) Suggest **three** variables that the scientists should have controlled in the investigation.

1 \_\_\_\_\_  
\_\_\_\_\_  
2 \_\_\_\_\_  
\_\_\_\_\_  
3 \_\_\_\_\_  
\_\_\_\_\_

(3)

The scientists recorded their results as a mean value for each group.

The scientists calculated the 'standard deviation' for each group's result.

Standard deviation is a measure of the spread of the individual results above or below ( $\pm$ ) the mean value.

The scientists gave each group's result as:

mean  $\pm$  standard deviation

The larger the standard deviation, the greater is the spread of results around the mean.

(d) Which of the results is the most precise?

Tick (✓) **one** box.

Mean =  $171.6 \pm 16.3$

Mean =  $177.2 \pm 15.4$

Mean =  $182.5 \pm 18.2$

Mean =  $205.2 \pm 19.4$

(1)

The following table and the figure show the scientists' results.

Drugs used	Metformin	A	B	Metformin + A	Metformin + B
Number of people	60	40	25	65	30
Mean blood glucose concentration 30 minutes after the meal in $\text{mg}/100 \text{ cm}^3 \pm$ standard deviation	$177.2 \pm 15.4$	$182.5 \pm 18.2$	$171.6 \pm 16.3$	$205.2 \pm 19.4$	$206.5 \pm 19.6$

**Key**

⌈ ± standard deviation

In the table and the figure some standard deviations of results overlap.

- An overlap of standard deviations shows the difference between the means is **not** significant.
  - **No** overlap of standard deviations shows a significant difference between the means.
- (e) A student looked at the scientists' method and the results in the table and figure above.

The student stated:

'Metformin works better when used with other drugs.'

Evaluate the student's statement.

---

---

To prevent sperm reaching the egg

(1)

(b) Which hormone causes thickening of the lining of the uterus?

Tick **one** box.

Auxin

Oestrogen

Testosterone

(1)

(c) On which day is fertilisation most likely to occur?

Use information from the graph above.

---

(1)

Contraception can be used to lower the chance of pregnancy.

(d) Draw **one** line from each method of contraception to how the method works.

Method of contraception	How the method works
Contraceptive pill	Barrier to prevent sperm reaching the egg
Diaphragm	Contains hormones to stop eggs maturing
Spermicidal cream	Kills sperm
	Slows down sperm production

(3)

- (e) The table below gives information about some different methods of contraception.

Method	Number of pregnancies per 100 women in one year	Possible Side effects
Diaphragm and spermicidal cream	8	Usually none, but can cause bladder infection in some women
Condom	2	None
Contraceptive pill	1	Mood swings, headaches, high blood pressure, blood clots, breast cancer

A man and a woman decide to use the condom as their method of contraception.

Suggest **three** reasons for this decision.

Use information from the table above and your own knowledge.

1. \_\_\_\_\_  
\_\_\_\_\_
2. \_\_\_\_\_  
\_\_\_\_\_
3. \_\_\_\_\_  
\_\_\_\_\_

(Total 9 marks)

**Q8.**

A person with Type 1 diabetes cannot make enough insulin.

- (a) Which organ makes insulin?

Tick **one** box.

Adrenal gland

Pancreas

Pituitary gland

Thyroid

(1)

- (b) A person with Type 1 diabetes can control the concentration of glucose in the blood by injecting insulin.

Complete the sentences.

Choose answers from the box.

<b>DNA</b>	<b>glycogen</b>	<b>kidney</b>
<b>liver</b>	<b>protein</b>	<b>skin</b>

Insulin acts on an organ called the \_\_\_\_\_.

This organ then takes in excess glucose from the blood and changes the glucose into \_\_\_\_\_.

(2)

- (c) Insulin cannot be taken as a tablet. This is because insulin is a type of protein.

What would happen to the insulin in the tablet if it reached the stomach?

---

---

(1)

Two people each drank the same volume of a glucose drink.

Person **A** has Type 1 diabetes.

Person **B** does **not** have diabetes.

**Figure 1** shows how the concentration of glucose in their blood changed.

**Figure 1**

- (d) How much higher was the **highest** concentration of glucose in the blood of person **A** than the **highest** concentration in person **B**?

Use information from **Figure 1**.

---

---

---

---

Answer = \_\_\_\_\_ mmol/dm<sup>3</sup>

(2)

- (e) Describe **one** other way that the results for person **A** were different from the results for person **B**.

Use information from **Figure 1**.

(1)

Type 2 diabetes is another form of diabetes. Type 2 diabetes is common in obese people.

People with Type 2 diabetes make enough insulin, but still cannot control their blood glucose concentration. This is because the body cells are not sensitive to the insulin.

**Figure 2** shows information about abdominal fat and insulin sensitivity in body cells.

**Figure 2**

(f) What type of relationship is shown in **Figure 2**?

Tick **one** box.

A negative correlation

No correlation

A positive correlation

(1)

(g) A person is at risk of developing Type 2 diabetes.

Suggest **two** ways the person could lower the chance of developing Type 2 diabetes.

1. \_\_\_\_\_

2. \_\_\_\_\_

(2)  
(Total 10 marks)

**Q9.**

It is important to maintain water balance in the body.

The graphs below show how much water a person gained and lost by different methods in one day.

When water is balanced, the volume of water taken in by the body is equal to the volume of water lost from the body.

(a) Calculate the volume of water the person lost in one day in faeces.

Use information from the graphs above.

---

---

---

---

Volume lost in faeces = \_\_\_\_\_  $\text{cm}^3$

(2)

(b) The graphs above show that one method of gaining water is by metabolism.

Which metabolic process produces water?

Tick **one** box.

- Breakdown of protein to amino acids
- Changing glycogen into glucose
- Digestion of fat
- Respiration of glucose

(1)

The next day, the person ran a 10-kilometre race.

The volume of water lost from the body through the skin and by breathing increased.

(c) Explain why more water was lost through the skin during the race.

---

---

---

---

(2)

(d) Explain why more water was lost by breathing during the race.

---

---

---

---

---

---

(3)  
(Total 8 marks)

**Q10.**

The menstrual cycle in a woman is controlled by hormones.

The diagram shows some of the glands in a woman's body that produce hormones.

The hormones that control the menstrual cycle are produced by the pituitary gland and by the ovaries.

(a) Which gland is the pituitary gland?

Tick **one** box.

A     B     C     D     E

(1)

(b) Which gland is the ovary?

Tick **one** box.

- A     B     C     D     E

(1)

(c) Complete the sentence.

In the menstrual cycle, one egg is released approximately every \_\_\_\_\_ days.

(1)

(d) Which hormone is used in the oral contraceptive pill?

Tick **one** box.

- Adrenaline
- Insulin
- Progesterone
- Testosterone

(1)

(e) Describe how the oral contraceptive pill stops a woman becoming pregnant.

---

---

---

---

(2)

(f) Complete the sentences.

Choose the answers from the box.

adrenaline    insulin    oestrogen    progesterone    testosterone

Development of the female secondary sex characteristics is controlled by \_\_\_\_\_.

Sperm production is stimulated by \_\_\_\_\_.

(2)

(Total 8 marks)

**Q11.**

Blood is filtered in the kidneys.

Some substances are then reabsorbed.

The amount of each substance reabsorbed varies.

Each day, a person:

- filters 180 dm<sup>3</sup> of water out of the blood
- produces 2 dm<sup>3</sup> of urine.

The diagram shows the process of filtration in the kidney.

(a) Explain why protein is **not** found in the urine of a healthy person.

---

---

---

---

(2)

(b) Explain why glucose is **not** found in the urine of a healthy person.

---

---

---

---

(2)

(c) Explain:

- why urea and sodium ions are found in urine
- why their concentration is higher on a hot day than on a cold day.

---

---

---

---

---

---

---

(3)

(d) The information below gives some features of two types of treatment for kidney disease.

**Dialysis treatment**

A dialysis session lasts about 8 hours.

A person needs 3 dialysis sessions every week for the rest of their life.

The person must have a diet low in protein and salt.

Dialysis costs £30 000 per year.

**Kidney transplant**

A kidney transplant requires surgery using general anaesthetic.

A suitable kidney donor is needed.

Drugs are used to suppress the immune system.

A transplant, and the first year's medical care, costs £51 000.

After the first year, the cost of drugs is £5 000 per year.

Evaluate the use of a kidney transplant instead of dialysis treatment for kidney disease.

---

(2)  
(Total 5 marks)

**Q14.**

Glands in the body produce hormones.

- (a) Use words from the box to label gland **A** and gland **B** on the diagram below.

<b>Adrenal</b>	<b>Pancreas</b>	<b>Pituitary</b>	<b>Testis</b>	<b>Thyroid</b>
----------------	-----------------	------------------	---------------	----------------

(2)

- (b) Which gland produces oestrogen?

Tick **one** box.

Ovary

Pancreas

Testis

Thyroid

(1)

(c) **Table 1** shows some methods of contraception.

**Table 1**

Type of contraception	Percentage (%) of pregnancies prevented
Oral pill	>99
Implant	99
Condom	98
Diaphragm	<96

Which method of contraception in **Table 1** is **least** effective at preventing pregnancy?

---

(1)

(d) Which method of contraception in **Table 1** will protect against sexually transmitted diseases like HIV?

---

(1)

(e) Another method of contraception is called the intrauterine device (IUD).

There are two main types of IUD:

- copper
- plastic.

Both types of IUD are more than 99% effective.

Look at **Table 2**.

**Table 2**

	Copper IUD	Plastic IUD
<b>How the IUD works</b>	<ul style="list-style-type: none"> <li>• releases copper</li> <li>• copper changes the</li> </ul>	<ul style="list-style-type: none"> <li>• releases a hormone</li> <li>• hormone thickens mucus from the cervix</li> </ul>

- (a) Explain how blood glucose levels are controlled in the body of someone who does **not** have diabetes.

---

---

---

---

---

---

---

---

---

---

(4)

- (b) Compare how each type of diabetes is caused.  
Suggest how each type of diabetes can be treated.

---

---

---

---

---

---

---

---

---

---

(4)

- (c) Look at the table below.

<b>Population of UK in 2015</b>	$6.5 \times 10^7$
<b>Number of people diagnosed with diabetes</b>	$3.45 \times 10^6$
<b>Estimated number of people with undiagnosed diabetes</b>	$5.49 \times 10^5$

Calculate the percentage (%) of the UK population estimated to have diabetes.

You should include both diagnosed and undiagnosed people in your calculation.

Give your answer to 2 significant figures.

---

---

---

---

---

Estimated percentage of population with diabetes = \_\_\_\_%

(3)

- (d) A urine test can be used to check for the presence of glucose in the urine.

Diabetes can also be diagnosed with a blood test to measure the concentration of blood glucose.

Suggest why a blood test is more reliable than a urine test.

---

---

(1)

- (e) A blood test called the glucose tolerance test checks how well the body processes glucose.

Concentrations of glucose in the blood are measured before and after drinking a glucose drink.

Patients are not allowed to eat food for 8 hours before the glucose tolerance test.

Suggest why patients are **not** allowed to eat for 8 hours before the test.

---

---

(1)

- (f) The diagram below shows the results of a glucose tolerance test for two patients, **A** and **B**.

Which patient has diabetes?

Justify your answer.

Patient \_\_\_\_\_

Justification \_\_\_\_\_

**Q17.**

Hormones are involved in controlling the menstrual cycle and fertility.

- (a) (i) Use the correct answer from the box to complete the sentence.

<b>auxin</b>	<b>follicle stimulating hormone (FSH)</b>	<b>thalidomide</b>
--------------	---	--------------------

A hormone produced by the pituitary gland is

\_\_\_\_\_

(1)

- (ii) Use the correct answer from the box to complete the sentence.

<b>luteinising hormone (LH)</b>	<b>oestrogen</b>	<b>statin</b>
---------------------------------	------------------	---------------

A hormone produced by the ovaries is

\_\_\_\_\_

(1)

- (b) (i) Why are fertility drugs given to some women?

\_\_\_\_\_  
\_\_\_\_\_

(1)

- (ii) A doctor injects fertility drugs into a woman. After the injection, the hormones travel to the woman's ovaries.

How do the hormones travel to the ovaries?

Draw a ring around the correct answer.

**through the  
bloodstream**

**through the  
neurons**

**through the  
skin**

(1)

- (c) Which **two** hormones are used in contraceptive pills?

Tick (✓) **two** boxes.

FSH

oestrogen

LH  progesterone

(2)  
(Total 6 marks)

**Q18.**

- (a) Which organ of the human body produces egg cells?

Draw a ring around the correct answer.

**liver                      ovary                      testis**

(1)

- (b) An egg joins with a sperm and develops into an embryo.

How many chromosomes are there in each cell of a human embryo?

Draw a ring around the correct answer.

**23                      46                      48**

(1)

- (c) Some women find it difficult to have a baby. A doctor may suggest that these women should use In Vitro Fertilisation (IVF) to help them have a baby.

**Table 1** shows how successful IVF was for women of different ages at one clinic.

**Table 1**

<b>Age of women in years</b>	<b>Percentage of women who had a baby</b>
<35	35
35–37	31
38–39	25
40–42	32
43–44	7
>44	0

- (i) A student thought that the result for women aged 40–42 was anomalous.

Suggest why the student thought this result was anomalous.

---

\_\_\_\_\_ (1)

- (ii) Describe the general trend in the results in **Table 1**.

You should ignore the anomalous result.

\_\_\_\_\_  
 \_\_\_\_\_ (1)

- (d) Some babies are born with a faulty chromosome.

Scientists investigated whether the chance of having a baby with a faulty chromosome is also related to the age of the woman.

**Table 2** shows the scientists' results.

**Table 2**

Age of women in years	Number of women per 1000 who had a baby with a faulty chromosome
25	2.0
30	2.6
35	6.1
40	19.6
45	66.0

- (i) A 45-year-old woman is more likely than a 25-year-old woman to have a baby with a faulty chromosome.

How many times more likely?

\_\_\_\_\_  
 \_\_\_\_\_

Answer = \_\_\_\_\_ times

(2)

- (ii) Suggest **two** reasons why many fertility clinics will **not** accept women over 40 years of age for IVF treatment.

Use information from **Table 1** and **Table 2** in your answer.

1.

\_\_\_\_\_

---

2.

---

---

(2)  
(Total 8 marks)

**Q19.**

Some people with diabetes do not produce enough insulin to keep their blood glucose at the correct levels.

(a) (i) Which organ monitors blood glucose levels?

Tick (✓) **one** box.

liver

pancreas

skin

(1)

(ii) What effect does insulin have on glucose in the blood?

Tick (✓) **one** box.

Insulin causes glucose to move into the cells.

Insulin increases the amount of glucose in the blood.

Insulin converts glucose to starch.

(1)

(b) Some people with diabetes inject insulin several times a day.

There are different types of insulin.

The graph shows some information about three different types of insulin, **A**, **B** and **C**.

- (i) Which type of insulin, **A**, **B** or **C**, should a person with diabetes inject just before eating a meal high in carbohydrates?

\_\_\_\_\_

Give a reason for your answer.

\_\_\_\_\_  
\_\_\_\_\_

(2)

- (ii) A woman with diabetes has a blood glucose level of 12 mmol per dm<sup>3</sup> of blood.

The woman's normal blood glucose level is 6 mmol per dm<sup>3</sup>.

The woman will need to inject insulin to lower her blood glucose level.

For each unit of insulin injected the blood glucose level will fall by 3 mmol per dm<sup>3</sup>.

How many units of insulin does the woman need to inject to bring her blood glucose level down to the normal level?

\_\_\_\_\_

Number of units = \_\_\_\_\_

(1)

- (c) Some people have pancreas transplants to treat diabetes.

Give **one** possible disadvantage of a pancreas transplant.

Tick (✓) **one** box.

The pancreas could be rejected.

The patient will need to inject insulin every day.

The patient's blood glucose levels may rise and fall too much.

(1)

(Total 6 marks)

**Q20.**

People with type 1 diabetes inject insulin to control their blood glucose level.

A pancreas transplant is another treatment for type 1 diabetes.

One risk of a pancreas transplant is organ rejection.

(a) Explain why a transplanted organ may be rejected.

---

---

---

---

---

---

---

(3)

(b) Scientists have developed an artificial pancreas to treat type 1 diabetes.

The diagram below shows how an artificial pancreas works.

- (i) A woman with type 1 diabetes has an artificial pancreas. The woman eats a meal high in sugar. The meal causes her blood glucose level to rise.

Use information from the diagram above to describe what happens to bring the blood glucose level of the woman back to normal.

---

---

---

---

---

---

---

---

---

(4)

- (ii) The traditional way of monitoring and treating type 1 diabetes is to take a small sample of blood and put it on a test strip to find out how much insulin to inject.

Suggest **one** possible advantage, other than not having to do blood

tests, of the method used in the diagram above.

---
