

Mark Scheme

Q1.

Question Number	Answer	Additional Guidance	Mark
(i)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> different alkanes have different boiling temperatures/points (1) because of (different) chain length/molar mass /strength of intermolecular forces/ number of electrons (1) 	<p>Allow Volatility for boiling temperature Allow Different alkanes condense at different temperatures Ignore melting temperatures if given with boiling temperatures Ignore densities</p> <p>Accept London /dispersion /van der Waals forces Allow reference to size A comparison such as 'longer alkanes have higher boiling points' scores 2 Ignore any reference to surface area Do not award references to cracking Do not award reference to just weight/mass Do not award incorrect trend</p>	(2)
Question Number	Answer	Additional Guidance	Mark
(ii)	Correct equation	<p><u>Example of equation:</u> $C_8H_{18} - C_2H_4 + C_6H_{14}$ OR $C_8H_{18} - 2C_2H_4 + C_4H_{10}$ OR $C_8H_{18} - 3C_2H_4 + C_2H_6$</p> <p>Allow $CH_2=CH_2$ for C_2H_4</p> <p>Products can be given in either order</p> <p>Do not award equations forming H_2</p>	(1)

Question Number	Answer	Additional Guidance	Mark
(iii)	Correct equation	<p><u>Example of equation:</u></p>  <p>Accept bonds to hydrogen atoms inside the ring, e.g.</p>  <p>Allow skeletal or structural formulae for hexane and for cyclohexane</p>   <p>Ignore $C_6H_{14} - C_6H_{12} + H_2$</p>	(1)

Q2.

Question Number	Answer	Mark
(i)	<p>The only correct answer is C (homolytic bond fission to form free radicals)</p> <p><i>A is incorrect because such bond fission would produce ions</i> <i>B is incorrect because the first step of the reaction produces free radicals by homolytic fission</i> <i>D is incorrect because the first step of the reaction produces free radicals</i></p>	(1)

Question Number	Answer	Additional Guidance	Mark
(ii)	<p>$122.9 \div (122.9 + 80.9) \times 100$</p> <p>or</p> <p>$122.9 \div (44.0 + (2 \times 79.9))$ $\times 100$ or</p> <p>$(122.9 \div 203.8) \times 100$</p> <p>= 60.304% (1)</p>	<p>Allow 123 \div (123+81) = 60.29%</p> <p>Award M1 only if final answer given as decimal 0.603 rather than %</p> <p>Allow TE for M2 for only one incorrect A, value</p> <p>Ignore SF</p> <p>Correct answer with or without working scores (2)</p>	(2)

Question Number	Answer	Mark
(iii)	<p>The only correct answer is D (the reaction produces a mixture of organic products)</p> <p><i>A is incorrect because bromine is very reactive</i> <i>B is incorrect because gaseous reactants do not necessarily give a poor yield</i> <i>C is incorrect because the kinetics of the reaction do not affect the yield</i></p>	(1)

Question Number	Answer	Additional Guidance	Mark
(iv)	<p>Amount of 1-bromopropane (1)</p> <p>So moles of propane required (1)</p> <p>So volume of propane required to 2 or 3 SF (1)</p> <p>Alternative route</p> <p>Target mass of 1-bromopropane required to produce 14.7 g (with a 31.0% yield) (1)</p> <p>Moles of propane required to produce the required mass of 1-bromopropane (1)</p> <p>So volume of propane required to 2 or 3 SF (1)</p>	<p>$14.7/122.9 = 0.11961$ (mol)</p> <p>$(0.11961/31) \times 100 = 0.38584$ (mol)</p> <p>$= 0.38584 \times 24.0 = 9.2601$ (dm³)</p> <p>$= 9.3 / 9.26$ (dm³)</p> <p>Allow $14.7/123 = 0.11951$ (mol)</p> <p>$(0.11951/31) \times 100 = 0.38552$ (mol)</p> <p>$= 0.38552 \times 24.0 = 9.2526$ (dm³)</p> <p>$= 9.3 / 9.25$ (dm³)</p> <p>$14.7 \times \frac{100}{31.0} = 47.4$ g</p> <p>$\frac{47.4}{122.9} = 0.3857$ (mol)</p> <p>$0.3857 \times 24.0 = 9.3 / 9.26$ (dm³)</p> <p>Award (2) for a final answer of 0.890 / 0.89 (dm³) (incorrect use of 31.0%)</p> <p>Answer assuming 100% yield scores (2) for final answer of 2.87 / 2.9 (dm³)</p> <p>Penalise incorrect units in M3</p> <p>Do not award M3 if Ideal Gas Eqtn used for propane volume</p> <p>Penalise incorrect rounding once only</p> <p>Correct answer to 2 or 3 SF with or without working scores (3)</p>	(3)

Q3.

Question Number	Answer	Mark
(i)	<p>The only correct answer is C (NO• is a species with an unpaired electron)</p> <p><i>A is not correct because nitrogen dioxide, NO₂, is formed during this reaction</i></p> <p><i>B is not correct because this would be NO⁻. NO• has 15 protons, 15 neutrons and 15 electrons</i></p> <p><i>D is not correct because radicals such as this are made by homolytic fission</i></p>	(1)

Question Number	Answer	Additional Guidance	Mark
(ii)	<ul style="list-style-type: none"> correct substances (1) correct balancing (1) 	<p>Example of equation</p> $2\text{C}_{10}\text{H}_{22} + 62\text{NO} \rightarrow 20\text{CO}_2 + 22\text{H}_2\text{O} + 31\text{N}_2$ <p>Ignore a dot on NO ALLOW multiples</p>	(2)

Question Number	Answer	Additional Guidance	Mark
(iii)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> oxygen is present and so $\text{C}_{10}\text{H}_{22}$ / intermediate compounds might react with oxygen <p>Or</p> <p>NO might react with CO</p>	<p>Allow there is (enough) oxygen for complete combustion</p> <p>Allow the reaction must occur in a series of steps as there are too many particles reacting in the equation</p> <p>Allow it is unlikely for the reactants to be in the correct ratio Allow it is unlikely there will be enough NO / decane Allow reactants can react in other ways giving formation of other named products (such as CO, C, NO_x)</p> <p>Allow NO may react with other substances / air / oxygen to form NO_x / oxides of nitrogen / other nitrogen containing products</p>	(1)

Q4.

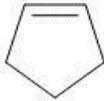

Question Number	Acceptable Answer	Additional Guidance	Mark
(i)	Award any two from the following: <ul style="list-style-type: none"> they have the same general formula (1) they / neighbouring compounds differ from each other by a $-\text{CH}_2-$ group (1) they have the same functional group / display similar chemical properties (1) they show a gradual change / trend in physical properties (1) 	Allow example of general formula, e.g alkanes are $\text{C}_n\text{H}_{2n+2}$ Do not award 'the same formula / molecular formula / structural formula' Allow 'the same chemical properties' Ignore 'the same physical properties' or 'similar physical properties'. Trend must be stated or implied. Allow a stated property such as boiling temperature	(2)

Question Number	Acceptable Answer	Additional Guidance	Mark
(ii)	<ul style="list-style-type: none"> alkene(s) 	Do not award alkanes	(1)

Q5.

Question Number	Answer	Mark
(i)	The only correct answer is A (50 cm ³) B is incorrect because this is the increase in volume from 200 cm ³ of ethane C is incorrect because this is the volume of CO ₂ formed D is incorrect because this is the total volume of CO ₂ and H ₂ O formed	(1)

Question number	Answer	Additional Guidance	Mark
(ii)	<ul style="list-style-type: none"> calculation of x (1) calculation of y (1) structure of cyclopentene (1) 	<p>Example of calculation (volume of CO₂ = 125 (cm³) so $x = 125/25 = 5$)</p> <p>$(25 + 25(5 + (y/4)) - 75 = 125)$ $y = 8$</p>  <p>Allow the skeletal formula of any cyclic C₅H₈ compound with C=C e.g. a methylcyclobutene TE on x and y for a cyclic hydrocarbon</p>	(3)

Q6.

Question Number	Answer	Additional Guidance	Mark
(i)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> because sulfur compounds/impurities in fuel and react with oxygen (from air) (1) because nitrogen in the air and reacts with oxygen (from air) (1) 	<p>Penalise omission of oxygen (from air) once only</p> <p>Allow nitrogen compounds in the fuel</p>	(2)

Question Number	Answer	Additional Guidance	Mark
(ii)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> (because although sulfur dioxide is removed) carbon dioxide is produced. (1) carbon dioxide is a greenhouse gas (and must therefore be removed/stored) (1) 	<p>Do not award more energy/fossil fuel burned to heat the reaction</p> <p>Allow carbon dioxide adds to/causes global warming</p>	(2)

Q7.

Question Number	Answer	Mark
(i)	<p>The only correct answer is C (fractional distillation)</p> <p><i>A is incorrect because the process is used to produce smaller hydrocarbons</i></p> <p><i>B is incorrect because the process is used to produce branched and cyclic hydrocarbons</i></p> <p><i>D is incorrect because the process is used to heat reaction mixtures</i></p>	(1)

Question Number	Answer	Additional Guidance	Mark
(ii)	<p>An explanation that makes reference to one of the following pairs of points</p> <p>Either</p> <ul style="list-style-type: none"> the OH groups (in compound X) can form hydrogen bonds (1) so more energy is needed to vaporise compound X / break intermolecular forces in compound X (1) <p>Or</p> <ul style="list-style-type: none"> hydrocarbons have only London forces, but compound X has hydrogen bonds (as well) (1) hydrogen bonds are stronger (than London forces) (1) 	<p>Ignore references to dipole-dipole interactions</p> <p>Allow 'the oxygen (in compound X) can form hydrogen bonds')</p> <p>Allow 'more energy is needed to break bonds in compound X' if H bonds discussed</p> <p>Any reference to the breaking of covalent bonds loses M2 only</p>	(2)

Q8.

Question Number	Acceptable Answer	Additional Guidance	Mark
	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> shorter chain alkanes and alkenes formed (1) Alkenes are useful starting materials in organic synthesis / used for making polymers / plastics (1) Shorter chain alkanes are more in demand / higher value / can be used as fuel (1) 	<p>Answers only referring to hydrocarbons and not alkanes and / or alkenes can only score M3.</p> <p>Allow shorter chain hydrocarbons and alkenes formed</p> <p>Allow for a named product of synthesis, e.g. ethanol / alcohol / dihaloalkane etc..</p> <p>Ignore just 'are more useful'</p> <p>Allow 'Shorter chain hydrocarbons are more in demand / higher value / are better fuels than longer chain hydrocarbons'</p> <p>If M2 and M3 are not scored award 1 mark for 'to make polymers / plastics and fuels / higher value compounds' OWTTE.</p>	(3)

Q9.

Question Number	Acceptable Answer	Additional Guidance	Mark
(i)	<ul style="list-style-type: none"> hexane / $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_3$ 	<p>Allow displayed formula / skeletal formula</p> <p>Do not award hexene</p> <p>Ignore C_6H_{14}</p>	(1)

Question Number	Acceptable Answer	Additional Guidance	Mark
(ii)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> isomers in petrol fraction have branched chains (1) branched chains have a lower surface area / do not pack so closely together (1) intermolecular forces / van der Waals' forces / London forces / dispersion forces / instantaneous dipole-induced dipole forces are weaker (so boiling temperature is lower) (1) 	<p>Unambiguous mention of breaking bonds within molecules can only score M1</p> <p>Allow isomers can be secondary or tertiary Allow branched chains have lower boiling temperatures Ignore smaller molecule / smaller chain / shorter chain Do not award cyclic / geometric isomers / alkenes</p> <p>Allow branched chains have less points of contact</p> <p>Do not award unless clearly forces / bonds between molecules or 'intermolecular' is seen</p>	(3)

Q10.

Question Number	Answer	Mark
(i)	D (σ , homolytic)	(1)

Question Number	Acceptable Answers	Additional Guidance	Mark
(ii)	<ul style="list-style-type: none"> $\text{C}_2\text{H}_6 + \text{Cl}\cdot \rightarrow \text{C}_2\text{H}_5\cdot + \text{HCl}$ (1) $\text{C}_2\text{H}_5\cdot + \text{Cl}_2 \rightarrow \text{C}_2\text{H}_5\text{Cl} + \text{Cl}\cdot$ (1) 	<p>Equations can be in either order</p> <p>Allow correct structural / displayed / skeletal formulae</p> <p>Allow dots / circles anywhere on formula</p> <p>Allow 1 mark for two correct steps but using the incorrect alkane / bromine</p> <p>Allow 1 mark if both propagation steps correct but initiation / termination steps also written and not labelled as such or additional incorrect propagation step(s)</p> <p>Ignore state symbols and curly arrows, even if incorrect</p> <p>Penalise missing dots once only</p> <p>Comment: If $\text{C}_2\text{H}_5\cdot$ appears in both equations but equations are otherwise correct, allow 1 as TE</p>	(2)

Question Number	Acceptable Answers	Additional Guidance	Mark
(iii)	<ul style="list-style-type: none"> (two) ethyl/ $\text{C}_2\text{H}_5\cdot$ radicals react together or $\text{C}_2\text{H}_5\cdot + \text{C}_2\text{H}_5\cdot \rightarrow \text{C}_4\text{H}_{10}$ 	<p>Allow $\text{C}_2\text{H}_5 + \text{C}_2\text{H}_5 \rightarrow \text{C}_4\text{H}_{10}$</p> <p>Ignore termination</p> <p>Ignore just '(two) radicals react together'</p> <p>Ignore ethane radicals / ethyl groups</p> <p>Do not allow molecules / ions</p> <p>Do not allow incorrect radicals or product</p> <p>Do not allow initiation / propagation / elimination / substitution</p>	(1)

Q11.

Question Number	Answer	Additional Guidance	Mark
	An answer which makes reference to: <ul style="list-style-type: none"> a compound of hydrogen and carbon only 	Allow absence of 'only' Allow substance/molecule/chain/species for compound Do not award reference to a carbon and/or a hydrogen Do not award 'an element made of carbon and hydrogen' Do not award a mixture of carbon and hydrogen Do not award contains carbon and hydrogen molecules	(1)

Q12.

Question Number	Answer	Additional Guidance	Mark
(i)	Correct equation	$2\text{NO} + 2\text{CO} \rightarrow \text{N}_2 + 2\text{CO}_2$ Accept multiples Ignore catalysts and conditions if stated	(1)

Question Number	Answer	Additional Guidance	Mark
(ii)	A description that makes reference to the following points: <ul style="list-style-type: none"> adsorption of gases to catalytic surface (1) weakening of bonds (and chemical reaction) on catalytic surface (1) desorption of products from catalytic surface (1) 	Absence of reference to the catalytic surface results in a deduction of one mark Do not award absorption or "stick" Allow bonds break (and reaction occurs) on catalytic surface Ignore the type of interaction referred to between the reactants and the catalytic surface Allow 'release' of products from catalytic surface Allow de-adsorbed	(3)

Q13.

Question Number	Acceptable Answers	Additional Guidance	Mark
	<ul style="list-style-type: none"> correct <u>skeletal</u> formulae for heptane and cycloheptane <p>(1)</p> <ul style="list-style-type: none"> formula for hydrogen <p>(1)</p>	<p>Mark independently but max 1 if additional reactants and/or products or more than 1 mole/molecule of hydrogen</p> <p>Do not allow just structural or displayed formulae for the organic reactant or product, or any combination of formulae, for M1</p> <p>Ignore additional formulae written as working</p> <p>Ignore shape of heptagon, provided it has 7 sides</p> <p>Ignore any conditions, even if incorrect</p>	(2)

Q14.

Question Number	Answer	Additional Guidance	Mark
(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> chlorine / Cl₂ and ultraviolet / uv (light) 	<p>Allow sunlight</p> <p>Ignore chlorine radicals</p> <p>Ignore temperatures</p> <p>Do not award presence of an additional catalyst</p> <p>Do not award hydrogen chloride / HCl / hydrochloric acid / HCl(aq)</p>	(1)

Question Number	Answer	Mark
(ii)	<p>The only correct answer is C (free radical substitution)</p> <p><i>A is not correct because as ethane is saturated the reaction is a substitution</i></p> <p><i>B is not correct because as ethane is saturated the reaction is a substitution</i></p> <p><i>D is not correct because as ethane has no bonds with significant polarity the reaction is not nucleophilic</i></p>	(1)

Question Number	Answer	Additional Guidance	Mark
(iii)	<ul style="list-style-type: none"> chloroethane reacts with a chlorine radical OR both correct structure formulae of the products including identification of which is which (1) formation of 1,1-dichloroethane via radical mechanism OR 	<p>Allow radical dots anywhere on the radical species throughout</p> <p>$\text{CH}_3\text{CH}_2\text{Cl} + \text{Cl}\cdot \rightarrow \cdot\text{CH}_2\text{CH}_2\text{Cl} + \text{HCl}$ or $\text{CH}_3\text{CH}_2\text{Cl} + \text{Cl}\cdot \rightarrow \text{CH}_3\text{CHCl}\cdot + \text{HCl}$ Allow $\text{C}_2\text{H}_5\text{Cl} + \text{Cl}\cdot \rightarrow \text{C}_2\text{H}_4\text{Cl}\cdot + \text{HCl}$</p> <p>$\text{CH}_3\text{CHCl}_2$ 1,1-dichloroethane $\text{CH}_2\text{ClCH}_2\text{Cl}$ 1,2-dichloroethane</p> <p>$\text{CH}_3\text{CHCl}\cdot + \text{Cl}\cdot \rightarrow \text{CH}_3\text{CHCl}_2$ or $\text{CH}_3\text{CHCl}\cdot + \text{Cl}_2 \rightarrow \text{CH}_3\text{CHCl}_2 + \text{Cl}\cdot$ Ignore reactions of $\text{C}_2\text{H}_4\text{Cl}\cdot$</p>	(3)

	<p>overall equation for the formation of 1,1-dichloroethane (1)</p> <ul style="list-style-type: none"> formation of 1,2-dichloroethane via radical mechanism <p>OR</p> <p>equation for the formation of 1,2-dichloroethane (1)</p>	$\text{CH}_3\text{CH}_2\text{Cl} + \text{Cl}_2 \rightarrow \text{CH}_3\text{CH}_2\text{Cl}_2 + \text{HCl}$ <ul style="list-style-type: none"> $\text{CH}_2\text{CH}_2\text{Cl} + \text{Cl}\cdot \rightarrow \text{CH}_2\text{ClCH}_2\text{Cl}$ or $\text{CH}_2\text{CH}_2\text{Cl} + \text{Cl}_2 \rightarrow \text{CH}_2\text{ClCH}_2\text{Cl} + \text{Cl}\cdot$ <p>Ignore reactions of $\text{C}_2\text{H}_4\text{Cl}\cdot$</p> $\text{CH}_3\text{CH}_2\text{Cl} + \text{Cl}_2 \rightarrow \text{CH}_2\text{ClCH}_2\text{Cl} + \text{HCl}$ <p>If M2 and M3 are not scored allow (1) for a balanced equation for the reaction of $\text{C}_2\text{H}_4\text{Cl}\cdot$ with $\text{Cl}\cdot$ or Cl_2 to form $\text{C}_2\text{H}_4\text{Cl}_2$ (examples shown)</p> $\text{C}_2\text{H}_4\text{Cl}\cdot + \text{Cl}\cdot \rightarrow \text{C}_2\text{H}_4\text{Cl}_2$ <p>or</p> $\text{C}_2\text{H}_4\text{Cl}\cdot + \text{Cl}_2 \rightarrow \text{C}_2\text{H}_4\text{Cl}_2 + \text{Cl}\cdot$	
--	---	--	--

Question Number	Answer	Additional Guidance	Mark
(iv)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> 98 peak is due to $\text{C}_2\text{H}_4^{35}\text{Cl}_2^+$ and 102 peak is due to $\text{C}_2\text{H}_4^{37}\text{Cl}_2^+$ <p>(1)</p> <ul style="list-style-type: none"> 100 peak is due to $\text{C}_2\text{H}_4^{35}\text{Cl}^{37}\text{Cl}^+$ <p>(1)</p>	<p>Allow $\text{C}_2\text{H}_4^{35}\text{Cl}^{35}\text{Cl}^+$</p> <p>Allow $\text{C}_2\text{H}_4^{37}\text{Cl}^{37}\text{Cl}^+$</p> <p>Allow structural formulae of the molecular ions of either 1,1- or 1,2-dichloroethane or both</p> <p>Allow structures with the positive charge anywhere including outside of brackets of any type.</p> <p>Penalise omission of + once only</p>	(2)

Question Number	Answer	Additional Guidance	Mark
(v)	<p>An answer that makes reference to the following point</p> <ul style="list-style-type: none">^{35}Cl and ^{37}Cl atoms are in a 3:1 ratio	<p>Answer must refer to the isotopes of chlorine. Ignore comments about isotopes of carbon or hydrogen or just isotopes</p> <p>Allow a larger proportion of chlorine atoms are chlorine-35 than chlorine-37</p> <p>Allow the ratio of the peak heights to be 9:6:1</p> <p>Allow the abundance of chlorine- 35 and chlorine-37 are different</p> <p>Allow there are two isotopes of chlorine</p>	(1)

Question Number	Answer	Additional Guidance	Mark
(vi)	<p>An answer that makes reference to the following points:</p> <p>Either</p> <ul style="list-style-type: none"> the peaks are formed by fragments containing both chlorine atoms attached to one carbon atom <p>or</p> <p>the fragments are $\text{CH}^{35}\text{Cl}^{37}\text{Cl}^+$, $\text{CH}^{35}\text{Cl}_2^+$ and $\text{CH}^{37}\text{Cl}_2^+$ (1)</p> <ul style="list-style-type: none"> this fragmentation / configuration is only possible from 1,1-dichloroethane / is not possible from 1,2-dichloroethane (1) <p>Or</p> <ul style="list-style-type: none"> the peaks at 83, 85 and 87 represent the loss of a CH_3 group (1) only 1,1-dichloroethane has a methyl group (1) 	<p>Allow a diagram showing the fragmentation of 1,1-dichloromethane to form a fragment containing one carbon and two chlorine atoms</p> <p>Allow the use of molecule instead of fragment</p> <p>Do not award fragments where the number of hydrogens on the carbon changes</p> <p>Allow just CHCl_2^+</p> <p>Do not penalise the absence of the positive charge</p> <p>Do not award fragments where the number of hydrogens changes to allow for the different masses</p> <p>Allow only 1,1-dichloroethane has two chlorines on the same carbon / 1,2-dichloroethane does not have two chlorines on the same carbon</p> <p>Allow the peaks are 15 below the molecular ion values so they represent the loss of a CH_3 group</p>	(2)
